

## CalBatt at Palazzo Chigi: innovation for well-being

**Filomena Maggino, President of Benessere Italia support body to the Prime Minister Conte:** "the battery issue is a critical element for both energy and sustainable mobility, so **the contribution that CalBatt can give is important**"

**CalBatt** was invited to **Palazzo Chigi** for a discussion on the strategic issues regarding the policies for the well-being and quality of life of citizens, in the context of the meetings organized with the main industrial stakeholders by **Benessere Italia**, the technical-scientific support body to the Italian Prime Minister.

During the meeting **Gregorio Cappuccino (CEO of CalBatt)** illustrated to Professor Maggino the courageous choices, the difficulties but also the help received during a successful path that transformed a technology born in university laboratories in a company capable today of successfully collaborating with utilities and vehicle and battery manufacturers at an international level, providing cutting-edge solutions to encourage the development of **electric mobility** and **energy efficiency**, two crucial themes of the National Strategy for Sustainable Development.

It was an opportunity to share the innovative projects implemented by CalBatt for intelligent infrastructures to support **urban public transport** in important municipalities, the **efficiency of logistics** in the industrial sector, the efficient management of energy in **rail transport** and the optimal integration of **electric cars** into the distribution network, just in the days of the publication of **MISE decree on V2G** into the Gazzetta Ufficiale.
