

## Dynamo in the spotlight at the GIS Expo

Also this edition of the **GIS Expo of Piacenza** has seen the large participation of qualified operators extremely attentive to technological innovations in the logistics sector.

Among these innovations the latest model of the **Dynamo** charging system, exhibited by **SACER** as part of the **italian presentation of the Genkinger BAKA novelties**.

“We have noticed a great competence of the various players in the supply chain”, explains **Francesco Amoroso (CTO of CalBatt)**, “increasingly able to make the most of the opportunities offered by CalBatt technology, which range from the famous **Id-Charging to optimize energy efficiency**, to Wi-Fi connectivity for **remote battery monitoring** through the **IdPortal**, to the possibility of creating real **smart charging infrastructures** for forklift fleets thanks to the interconnection with the **MaeStor** management platform.”

“Technology”, continues **Gregorio Cappuccino (CEO of CalBatt)**, “on which we have invested as pioneers, realizing that the world of logistics would inevitably come into contact with that of **digital energy** and therefore placing us in a position of undisputed leadership. The facts are proving us right today: more and more partners in the world of forklift trucks, such as SACER, are deciding with a long-term vision to successfully target high value-added energy services, as well as various energy supply **Utilities** are proposing smart charging rooms for the implementation of both efficiency programs and grid flexibility services.”
